1. Kosmos' reporting boundary for environmental data is for operated production assets only. In 2021-2023, Kosmos' operated production assets were exclusively located in the U.S. Gulf of Mexico. During that time Kosmos also operated exploration blocks offshore Equatorial Guinea and São Tomé and Príncipe and, in 2023, assumed operatorship of the Yakaar-Teranga gas discovery offshore Senegal.

2. All waste in the U.S. Gulf of Mexico is E&P waste which, by EPA guidelines, is considered non-hazardous. However, because E&P waste is considered hazardous waste in our other host countries, Kosmos reports E&P waste as hazardous waste.

3. During the review of the 2021 data, a \$300 fine for a 2019 spill of approximately one gallon of drilling mud was identified as having been received in 2020. This amount does not include late fees or interest. There were no non-monetary environmental fines or penalties received in 2021.

4. Kosmos only has offshore operations located more than 5 km from the shoreline, therefore our reserves are not located in or near areas of conflict.

5. Kosmos only has offshore operations.
